World Customs Organization

Knowledge Academy

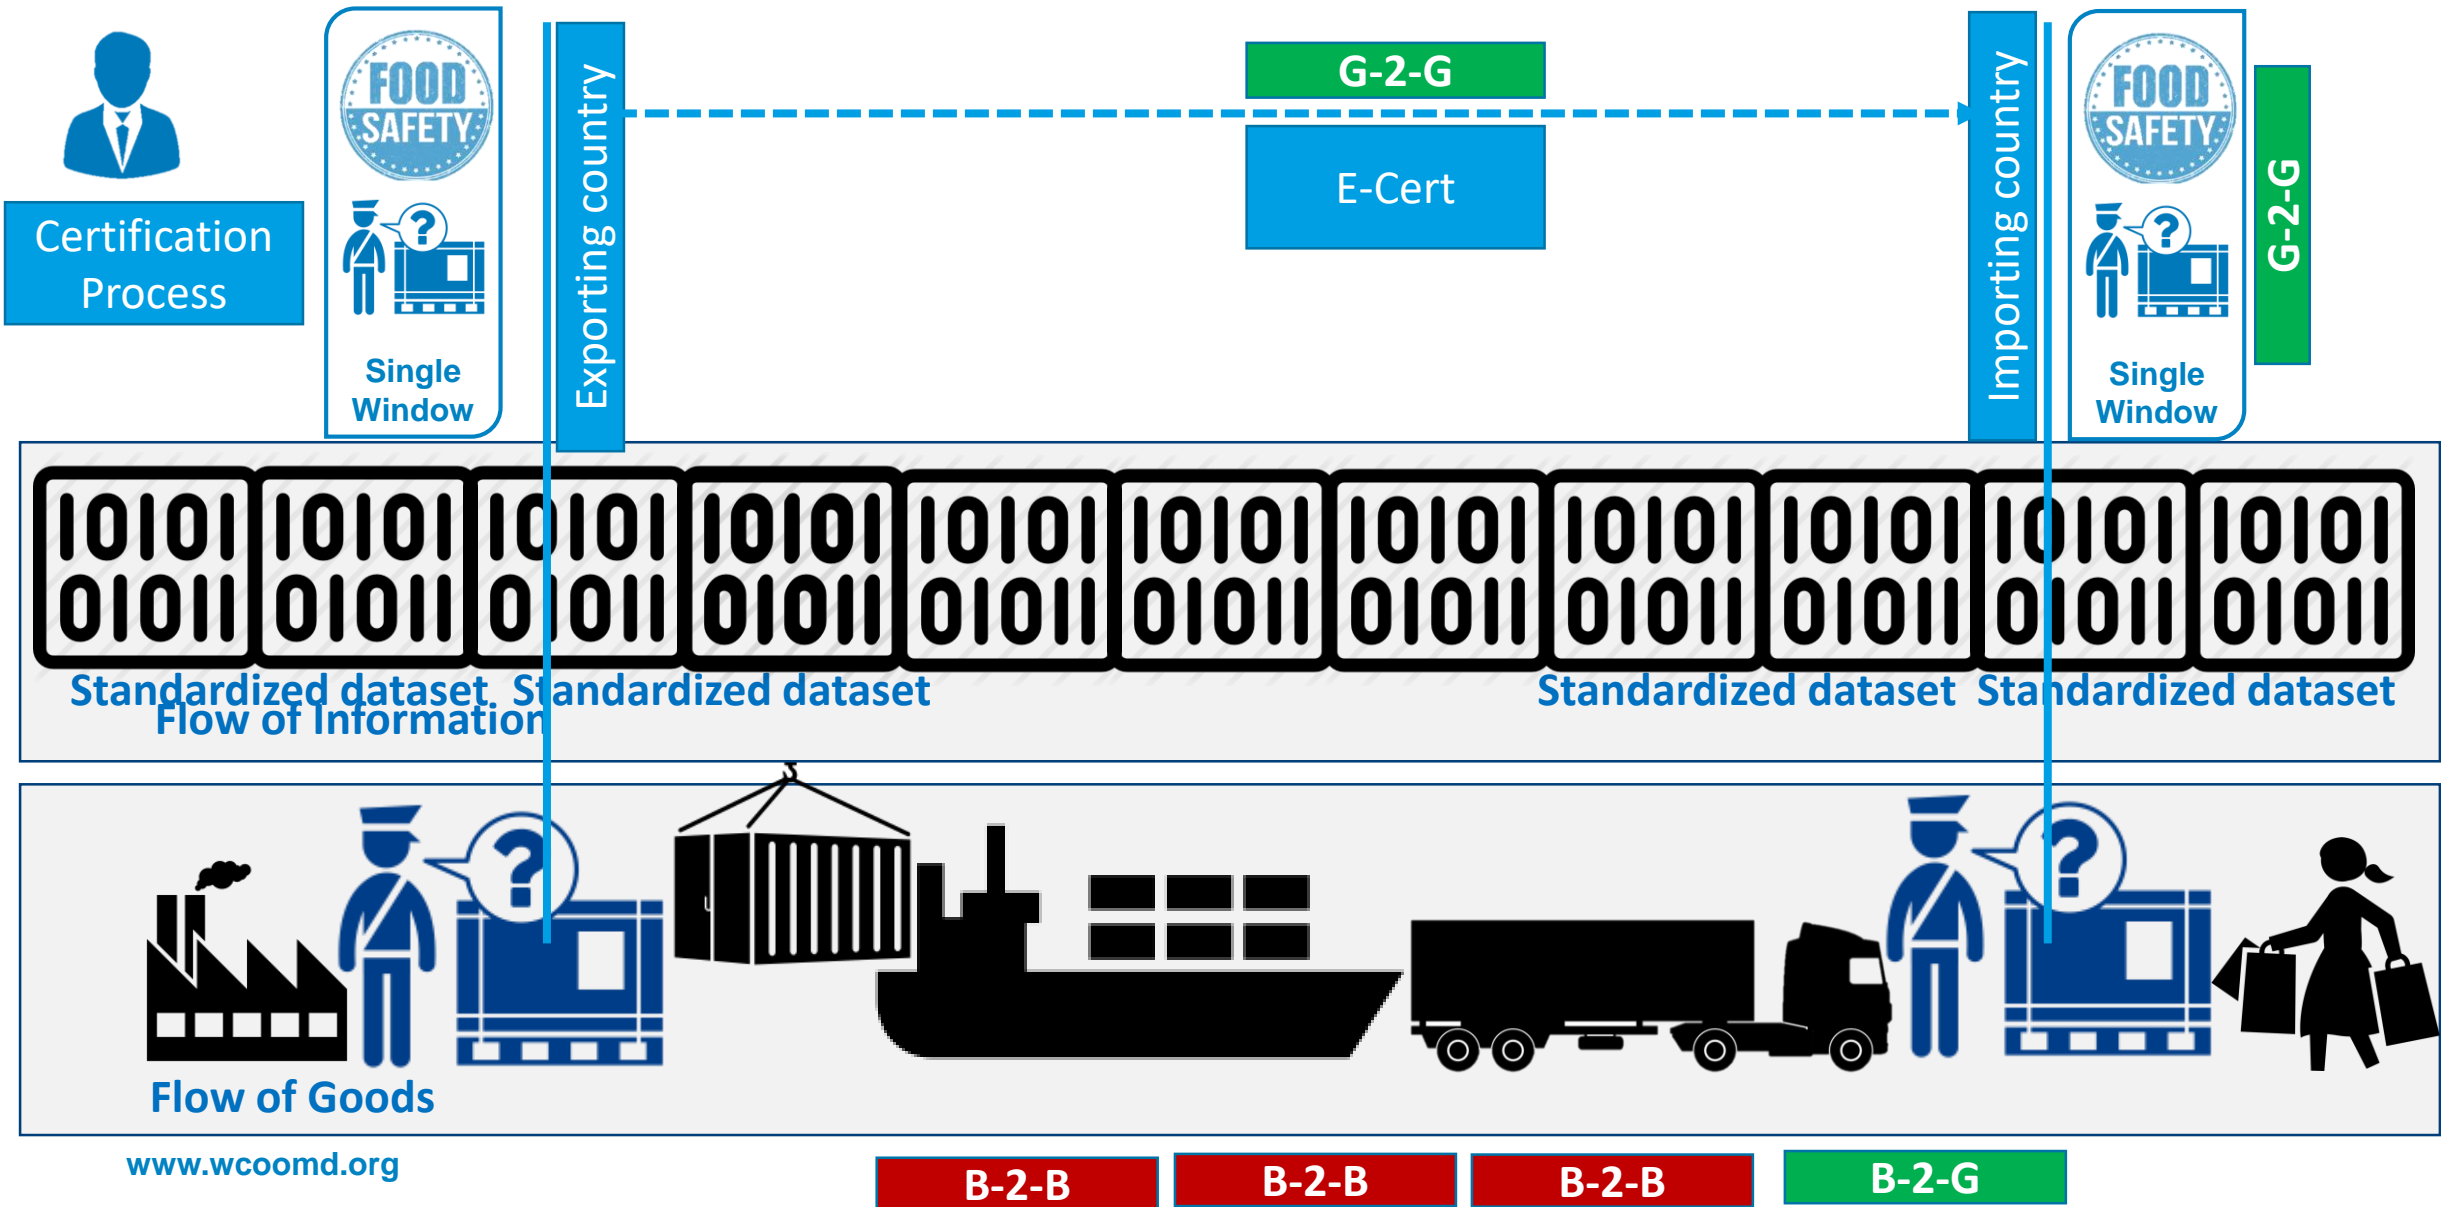

June 2022

- The WCO Data Model (DM) is the data foundation for global trade interoperability
- The WCO DM a universal language for cross-border data exchange enabling the implementation of Single Window systems and fuelling Data Analytics.
- It is a compilation of clearly structured, harmonized, standardized, and reusable sets of data definitions and electronic messages designed to meet the operational and legal requirements of Customs and other cross-border regulatory agencies (CBRAs) responsible for border management.

Streamlining flow of goods and flow of information

General Annex Revised Kyoto Convention RKC 7.2:

- When introducing computer applications, the Customs shall use relevant internationally accepted standards.

WCO Recommendation on the use of the WCO DM:

- Adopt the WCO Data Model for the identification and definition of all cross-border regulatory data requirements related to pre-arrival/pre-departure formalities and procedures for import, export and transit
- Use the WCO data elements, their names and reference numbers (WCO ID's), the data element descriptions, the character representations (including the suggested code lists) in describing and composing electronic messages
- Use the standard electronic messages described in the WCO Data Model in Government to Government and Business to Government /Government to Business electronic messages.

Information Model

Attribute Name

Identification issuing country, code **R147**

To achieve a globally unique standardised TIN format for cross-border exchanges, add this separate 2-digit alpha numeric ISO Country Code attribute as a qualifier to the existing national identifier.

Role code **R005**

Code giving specific meaning to a party

Exporter, coded **R032**

To identify the party who makes , or on whose behalf the export declaration is made, and who is the owner of the goods or has similar rights of disposal over them at the time when the declaration is accepted

Exporter - name **R031**

Class:

WCO DM representation of a particular supply chain object

Data Element:

A piece of information that provide specific detail to a particular supply chain object represented by a Class

Class Name	Attribute Name	Format	Code List
DepartureTransportMeans 46A  <i>Departure of goods in the context of export</i>	Identification issuing country, code R147 <i>To achieve a globally unique standardised TIN format for cross-border exchanges, add this separate 2-digit alpha numeric ISO Country Code attribute as a qualifier to the existing national identifier.</i>	a2	EDIFACT codes (3207) = ISO 3166-1 2-alpha code
ExportCountry 95B <i>Details related to the export country</i>			
Exporter 57A  <i>Person who makes or on whose behalf an export declaration is made</i>	Role code R005 <i>Code giving specific meaning to a party</i>	an..3	EDIFACT codes (3035)
IntermediateConsignee 77A <i>A party who takes possession of the goods from consignor to exporting carrier and from importing carrier to consignee</i>	Exporter, coded R032 <i>To identify the party who makes , or on whose behalf the export declaration is made, and who is the owner of the goods or has similar rights of disposal over them at the time when the declaration is accepted</i>	an..35	
	Exporter - name R031		

Code:

- Concise and consistent representation of a piece of information, which otherwise expressed with longer, inconsistent text
- Eliminate risk of typography error
- Reduce the size of information
- Enable automated data processing

Example:

- Unit measurement codes
- Currency code
- 2 Digit Country Code
- UN Location Code

Consistent representation of a piece of information:

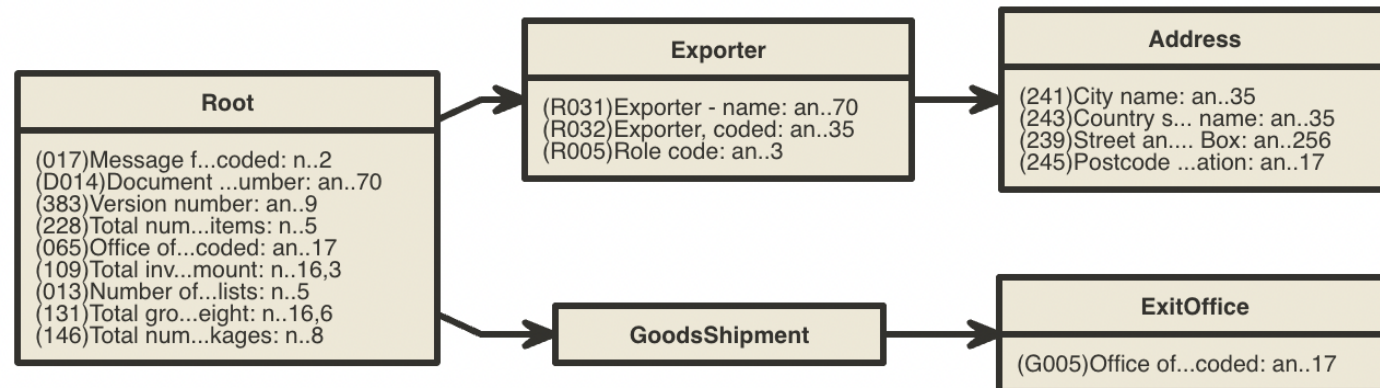

- BE
- Belgium
- Belgia
- Belgique
- Blegia (typo)

WCO DM representation of relationship between a piece of information to the others

- Represented with UML Class Diagram

Information Packages:

- WCO DM is a multipurpose regulatory data management framework;
- Information package is a tool to organize the subsets of the WCO DM based on their specific purposes
- An IP may have additional details related to the procedures it is implemented
- The basis to generate certain electronic messages / electronic messages' schemas.

Release of version 3.11.0

- The WCO Released version 3.11.0 of the WCO DM in December 2021
- Published in an interactive Web App (WCO DM App)

WCO DM Version 3.11.0 Include:

- Changes to the WCO DM **approved** by the Data Model Projects Team (DMPT) through the WCO DM Maintenance Procedure from Sep 2021 – May 2022
- Message Implementation Guide (MIG) for the International Maritime Organization (IMO) Compendium
- MIG for the updated WCO – Universal Postal Union - Joint Message Standard (CUSITM/CUSRSP)

More information

The WCO Data Model is a set of carefully combined data requirements that are mutually supportive and which will be updated on a regular basis to meet the procedural and legal needs of cross-border regulatory agencies such as Customs, controlling export, import and transit transactions. It is consistent with other international standards such as the United Nations Trade Data Elements Directory (UNTDDED).

WCO Data Model not only includes data sets for different customs procedures but also information needed by other Cross-border Regulatory Agencies for the cross-border release and clearance at the border. The
