

## Programme Scientific Tour WCO Technology Conference Douane

Date: donderdag 20 oktober

Time: 13.30u – 17.00u

Location: Brightlands Smart Services Campus Heerlen – 6<sup>th</sup> floor

Number of guests: 100 max

### About WCO Technology Conference

Under the theme “Driving Customs performance with data and technology in the changing landscape of global trade”, the Technology Conference is aimed at exploring technology-supported solutions enabling Customs to operate in a fully digital environment and create an operating model that captures and exploits data from across the trade ecosystem.

A variety of technology-related topics will be discussed during the three-day event, including the Customs-to-Customs exchange of information, data analytics, artificial intelligence and machine learning, and the implications of the growing volumes of e-commerce on Customs processes and procedures.

It offers excellent opportunities for Customs administrations and their stakeholders to obtain the latest information about trends and developments in the field of technology whilst facilitating discussions on Customs modernization and capacity building programs.
