#### MADE FOR THE GREAT OUTDOORS

At KOMPAN we have built outdoor activity areas for more than 50 years. We use only the toughest materials to ensure our solutions withstand the test of weather and usage for decades to come.

#### FOR ALL LOCATIONS

Available in several designs and materials. Obstacle courses and street workouts also come in Robinia wood to enhance a natural look or to bring nature into an urban environment.

for

# FITNESS & SPORT FOR OUTDOORS

For all users, all purposes and all locations

Across the world, people are moving outside to be active. In recent years, there has been an increase in this trend where local governments, communities, sports clubs, developers, amongst others, are building outdoor fitness and sports areas for their residents and members.

#### For all users and all purposes

- Gyms that want to provide their members with the option to be outside while getting truly challenging exercise
- Sports clubs that want their broad

- audience of members to have a motivating obstacle course as an option
- Local Governments that want to make fitness available to everybody in the proximity of residential areas
- Cities that want to make outdoor sports courts available for teenagers and adults to play basketball, football, hockey, and more
- Retirement villages that want their residents to stay active and have a healthy senior life.

# **EFFECTIVE OUTDOOR FITNESS**

#### More value in less time

■■ We know very well from science what it takes to exercise effectively. Whether it's for health or performance, we know the intensity, duration and type of exercise that creates results. It seems evident that exercise equipment must have the functionality to accommodate these demands, but that hasn't always been the case for outdoor fitness. With the latest offerings from KOMPAN, it is now possible to fully recreate outdoors what usually has only been

available in high-quality indoor training facilities

One of the things we care about is making exercise equipment for people of all sizes, ages and abilities. With KOMPAN products, this is achieved in two ways: scalable user positions and adjustable resistance. In other words, no matter who you are, you will be able to use KOMPAN's equipment in a way that optimises your individual results.

#### THE RIGHT WORKLOAD FOR EVERYONE

The workload on the cardio bike can be adjusted from very easy to extremely hard.

#### MAGNETIC POWER

An innovative magnetic breaking system allows the user to increase the resistance by increasing the speed of movement. The patented system also functions as brake when someone drops the magnetic bells and will reduce the impact significantly

#### **TESTING FOR EFFECTIVENESS**

The cardiorespiratory effectiveness of the Cross Trainer is validated with the same test methods that are used to test professional athletes.

## ENGAGING THE RIGHT MUSCLES

The screen shows muscle activity when exercising on the Cross Trainer. The design of all KOMPAN equipment is carefully refined to give the optimal effect and experience for the user.

#### SCIENTIFIC PRECISION

Everything is checked and then checked again.

# FITNESS BASED ON KNOWLEDGE

The KOMPAN Fitness Institute

K

Knowledge is the foundation for making KOMPAN Fitness products as good as they can possibly be. To make sure that knowledge is anchored in our culture, we have established the KOMPAN Fitness Institute. The institute is led by exercise physiologist Morten Zacho MSc, who has a background in research. KOMPAN Fitness Institute does its own research, but it also has a strong focus on following the latest

health and exercise-related science and also collaborates with universities and networks of experts.

The collective knowledge from science and best practice goes directly into product development, so whether it is products for seniors or exercise bikes for athletes, the endusers are guaranteed a safe and effective exercise experience.

This circle layout shows one of the most popular ways of working out, circuit training! It is an easy-to-use, well-rounded exercise programme that combines aerobic and resistance training.

The great thing about this combination is that it doesn't require any skills, is easy to use and is highly effective. With 30-minute

training slots over a period of time, anyone can improve their strength and increase their cardiovascular capacity.

Arranging the equipment in a circle also encourages people to engage with each other, and in the centre, there is plenty of space for a trainer! So, this is the perfect solution for group classes of up to 12 people.

	Product number	Product name		Product number	Product name
	FAZ607	Lower Back Bench	7	FAZ603	Leg Press
2	FAZ606	Sit Up Bench	8	PAR3005	Sign X-Large
3	FAZ604	Shoulder Press	9	FAZ605	Horizontal Row
4	FAZ602	Pull Down	10	FAZ521	Cross Trainer with Touchscreen
5	FAZ50101	City Bike with Touchscreen	11	PAR4050	Agora Bench
6	FAZ601	Chest Press			

The elegant, curved structures fit perfectly into any environment, be it boulevards, promenades, parks or on top of a skyscraper. This solution requires little safety surfacing and can blend into any natural setting. The exclusive design and organic shapes invite and attract people to come and exercise. And the fact that there is something for everyone makes it motivating for users of all ages and abilities. The bikes motivate people who are out for a stroll to sit down and get started! While users enjoy the scenic view, they will

get their daily dose of cardio training. Strength can be improved by using magnetic bells, starting with low weights for beginners and heavier weights when looking for a challenge.

The training value is huge, and countless exercise variations can be made. It is a perfect solution for a small space with big ambitions! Big enough for a complete sports team or a school class, this solution will fit anywhere.

Minor regional deviations may occur due to differences in safety standards

	Product number	Product name
	FAZ50101	City Bike with Touchscreen
2	FAZ52101	Cross Trainer with Touchscreen
3	FAZ30300	Step, 60cm
4	FAZ30200	Step, 40cm
5	FAZ201	Cross Training Combi 1

This outdoor fitness setup is the perfect solution for a gym, sports club or fitness centre. A mixture of nicely designed free weight systems for functional cross-training and obstacle course equipment to test speed and endurance. Users can train with familiar equipment like suspension trainers and kettlebells in a safe and vandalism-proof

Everybody can participate at their own level due to the cleverly designed and scalable exercise equipment. The obstacle course surrounding the cross-training area can be used independently or in conjunction with cross-training equipment, all of which adds heaps of value.

The fun factor is the element that gets people started over and over again. Adults can train together with their children under supervision, which allows them to experience that an active lifestyle is a fun lifestyle. In fact, once children are introduced to the courses, the onus will be on adults to keep up.

Minor regional deviations may occur due to differences in safety standards

7	FAZ102	Magnetic Bells			

On the rooftop, this gym has created the perfect extension of their indoor offering! A space that allows their members to do an entire workout routine while enjoying the outdoors, benefitting from all the positive effects on their health and wellbeing. Using a similar layout to the indoor area and creating different workout areas makes it easy for members to move around and find the activities they prefer.

The great thing about this training space is that it can be created just as easily in a public park, as all the equipment is certified for usage in unsupervised and public areas.

As we age, maintaining physical health and mobility is crucial. We must regularly exercise both body and mind to maintain overall health and quality of life. This solution is designed to promote active and healthy ageing and to provide a means of undertaking injury rehabilitation and strength, flexibility and mobility work in outdoor public spaces.

The beautiful garden invites everyone to come and be active at their own level, which is easy

to do with the adjustable strength and cardio equipment, ensuring easy maintenance of endurance and strength.

Falling is a major issue for older generations. Accidents often occur because the person is unable to overcome or react to minor changes in the surface they walk on. By regularly using this equipment, seniors can improve their balance, endurance, strength and flexibility – ultimately lowering the risk of falling.

Minor regional deviations may occur due to differences in safety standards

6	FSW228	Up & Go	12	FAZ601	Chest Press

This outdoor play and fitness solution trains adults while children play. It will trigger a natural desire to undertake activities where speed, agility and stamina combine whilst playing. This active area is fun and challenging, and its role is the broadest of all KOMPAN solutions: developing tomorrow's adults. In the play area, exercising means playing while being physically active. Children can improve their muscle strength on the BLOQX, develop good balance when

spinning on the Supernova and train their endurance when playing around in the Giant Towers

The separated by landscaping play and fitness equipment allows parents to exercise while their children enjoy the playground. Parents will be active role models, inspiring their children to live healthier and active lifestyles throughout their childhood and become active adults.

The fun of obstacle courses is the motivation that gets people starting over and over again. Outside of pure sport, playful exercise is rare, but obstacle courses create that opportunity. This solution is the ultimate obstacle course for families, inspired by obstacle course runs. Here people need to run, jump, crawl,

climb and keep their balance. What makes it so appropriate for families and different from their military counterparts is that you don't need to be superfit to have fun on this obstacle course. All obstacles offer both easy and challenging exercises so that everyone can do a full lap or several at their own level.

An action-packed area where everyone can work on an active lifestyle. Reminiscent of a traditional indoor health centre, this outdoor gym has been divided into different zones, providing multiple exercise opportunities. By combining it with a big playground, it

becomes a destination area and brings the neighbourhood together.

Here is a great mix of areas with equipment that is easy to use which doesn't require a lot of knowledge about training. This attracts people who want to experience effective outdoor training by themselves. The street

workout and crossfit areas appeal to a younger audience, as the inviting structures encourage fun and challenging training and offer the possibility for group classes. When creating an area of this size, it's important to leave open spaces. Here, these are provided by a running track and a group training area that can be used for a wide variety of activities such as warm-ups, yoga and boot-camp classes.

A perfect area for bringing the neighbourhood together.

To Street workout

The injury prevention zone is designed as the ideal solution for anyone who wants to train for health and injury prevention – or for anyone who needs to rehabilitate after an injury or disease.

The solution focusses on three key elements: cardio, strength and mobility. For each of the selected categories the equipment is based

on controlled and safe movements and adjustable resistance. This means that people with injuries, disabilities or other weaknesses can exercise effectively at their own level. For people with low physical capacity, it is also important that the solution is designed to be inviting and to make the users confident.

# BIKE, ARM BIKE AND CROSS TRAINER

#### Indoor cardio taken outdoors

The popular Cross Trainer known from indoor fitness is now available for outdoor training. With the best ergonomics on the market, KOMPAN's Cross Trainer provides an intense workout and adds an extra intensity layer with a special sprint mode (glute mode) that allows for a high-calorie workout that strengthens the glutes and lower limbs while focussing on the core stabiliser muscles. The KOMPAN Cross Trainer provides a safe, non-impact workout that avoids excessive stress on the joints.

The KOMPAN cardio family is designed to give users of all ages, physiques and fitness levels a cardiovascular training experience that keeps their heart rate above the 65% level (of their maximum heart rate) that is necessary to achieve a meaningful physiological effect. The intelligent system automatically adapts the workout to the pace set by the user, ensuring an appropriate level of resistance meets the user.

### MADE FOR THE OUTDOORS

Waterproof design made of extremely durable materials, highly resistant to vandalism and heavy usage.

#### CARDIO FOR ALL

The Arm Bike provides an intense upper-body workout. It is designed to include users of all abilities by its capacity to be used whilst standing, seated or from a wheelchair.

#### Adjustable workout

#### City Bike

The City Bike has a low access height, a wide comfortable saddle and a high-placed handlebar. This is therefore a universal stationary bike that can be used by anyone.

#### **Sport Bike**

The Sport Bike has the same adjustable resistance (25-750 watts) as the City Bike, but the bike's geometry is tailored towards performance training. The saddle is narrower, and the handlebar is placed lower, as seen in road racing or indoor spinning bikes.

#### **Cross Trainer**

The KOMPAN Cross Trainer is on par with the best of its indoor cousins and adds new features like the innovative sprint mode that allows the user to add power and shape to thighs and buttocks.

#### Arm Bike

The Arm Bike is truly inclusive and can be used whilst seated in your wheelchair, providing a great upper-body workout. When the exercise is done from a standing position, it provides a full-body workout and engages all large muscle groups.

City Bike with Touchscreen FAZ50101\*

Sport Bike with Touchscreen FAZ50201\*

**SEAT** 

The seats are incredibly durable and very comfortable due to their clever design with a cut-out centre and chamfered edges.

# EASY-TO-USE, ADJUSTABLE EQUIPMENT

Indoor functionality with outdoor quality

The new strength training machines from KOMPAN are total game changers when it comes to outdoor fitness. Now it is possible to have a complete, high-quality reproduction of the exercise setup found in indoor fitness. The new machines work with the same biomechanics and resistance mechanisms as indoor selectorised strength machines, but they add necessary outdoor features like safety, durability and simplified user experience.

The great thing about selectorised strength machines is that they can be used by everyone. They are great for active agers, great for athletes and great for people who just want to be healthy and feel good. Because of the controlled movements and the quick and simple selection of resistance, the machines are safe, easy to use and very time efficient.

# Full body workout with adjustable equipment

The five machines and the two benches represent the most popular indoor machines, and as a package, they cover all major muscle groups of the body. All angles of pushing and pulling for the upper body are fully covered with the Chest Press, the Shoulder Press, the Horizontal Row, and the Pull Down.

For the lower body, the Leg Press provides activation of all muscles of the lower body in one single exercise. By adding the Sit Up Bench and the Lower Back Bench, which focus on the core muscles, the body is fully covered.

Pull Down FAZ602\*

Leg Press FAZ603\*

# **FUNCTIONAL OUTDOOR TRAINING**

Use gravity and own body weight

Cross-training is a strength and conditioning workout that is made up of functional movements performed at a high-intensity level. These movements are actions that people perform in their day-to-day life, like squatting, pulling, pushing, and so on. Most users do workouts that feature variations of squats, push-ups and weightlifting that last for predetermined amounts of time to help increase strength and stamina. This varies from a traditional workout, which determines how many reps to do over any period of time and has predefined movements.

The amount of different exercises which can be performed on the Cross Systems is huge and also allows users to easily change the complexity and intensity of the workouts, making it a system that allows users of all ages and abilities to exercise in a fun and effective way.

### **MAGNETIC BELLS**

Three different weights (6, 9 and 12kg) are available, and they can freely rotate and move up and down a vertical tube, allowing for a huge variety of exercises.

### **BIG SIGNS**

The big information signs show a selection of the most relevant exercises with a variety of difficulty levels. The QR code will link to a video of the exercise and to the free KOMPAN app for even more exercises and workouts.

The box is one of the simplest training tools while still being highly versatile. So many exercises can be done using it, from simple step-ups to plyometric jumps.

# Scalable functional training in a beautiful design

Cross Systems are tall and visible from a distance, and with their dynamic look, they encourage local residents to come and exercise. They are designed as open structures providing innovative fitness equipment ranging from suspension trainers and pull-up bars to free weights and parallel bars. Central to Cross Systems is the scalability of the resistance, allowing everyone to train according to their individual fitness levels.

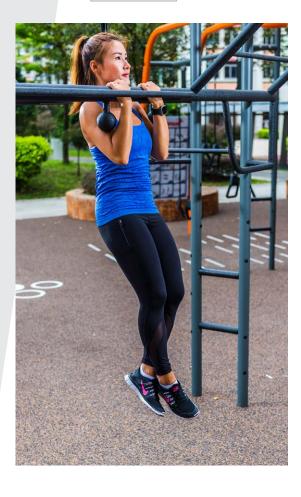

The different frames can stand alone or be placed as joined structures, ideal for group training.

The Cross Systems frames are not just appreciated by those who work out. In 2017, the Cross Systems won the Good Design Award in Australia and the European Product Design

# THE ULTIMATE BODYWEIGHT STATION

10 different workout stations in one. This combination package offers a superior street workout and callisthenics experience, featuring all essential elements for users to release their creativity.

### PARALLEL BARS

Parallel Bars can be found in every street workout area to train the upper body and core stability. The rounded corners make it easy to swing the legs across the Parallel Bars, making it safe to try new tricks without the risk of injuries.

# INSPIRED BY EXPERTS

Designed for fitness enthusiasts

Street workouts, callisthenics and bodyweight fitness are becoming increasingly prevalent, especially amongst young people. This has resulted in a need for high-quality street workouts and callisthenics equipment in

public parks, schools, and urban areas. The new KOMPAN Street Workout & Calisthenics solutions offer a wide variety of exercises in single structures, perfect for tight budgets and spaces.

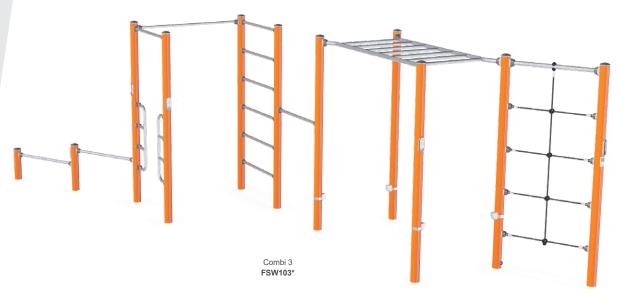

# STREET WORKOUT

# Combi products

The Street Workout products are inspired by experts and designed to motivate both professionals and fitness enthusiasts.

The series consists of various combination packages that offer a complete street workout and callisthenics experience within a compact footprint. These products offer a huge variety of exercises in a small space and for a small investment.

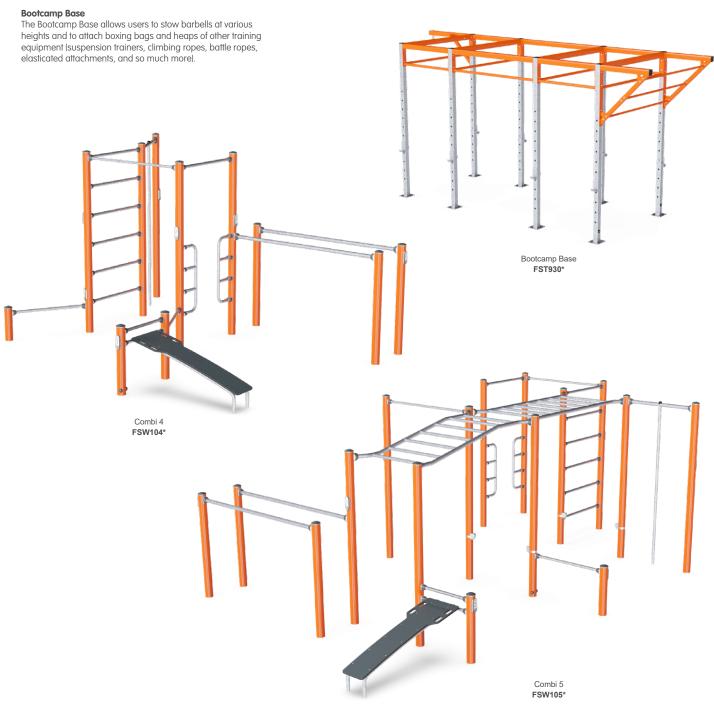

# STREET WORKOUT

# Standalone exercises

All exercise stations for street workouts are available as standalone products. The benefit of these stations is that users can move freely around the product without being hindered by other elements. This will inspire the users to create the wildest movements.

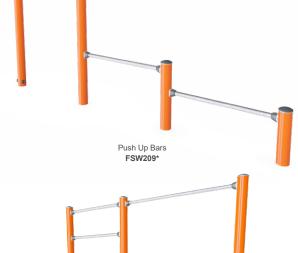

Products are made from steel and are extremely durable to ensure they can last for decades in even the harshest

# STAY FIT, BE MOBILE, AGE HEALTHILY

# With mobility and rehabilitation training

As we age, it is vital to keep staying physically active and maintain mobility. It's important to keep engaging our bodies and minds to maintain our health and retain our independence. KOMPAN's Stay Fit range is designed to promote active and healthy ageing and to make injury rehabilitation available outdoors in public spaces.

The KOMPAN Stay Fit range offers a variety of stations that facilitate the training of crucial skills. Each station is inspired by activities and obstacles that are commonplace in everyday life. Maintaining these skills is vital throughout all stages in life, making the Stay Fit portfolio relevant for all user groups.

# STRONG ANKLES AND GOOD BALANCE

The four exercises in the Balance Station have different difficulty levels. The placement of the four stations facing inwards around the ring encourages social interaction.

### **TESTING ABILITIES**

This station is geared towards executing the 'Sit & Rise' and the 'Up & Go' tests. The rail in the middle and the round handle at the turnaround point provides extra safety and support if required.

### PREVENT FALLING

The Surface Challenge is designed to increase the confidence and ability of older users to navigate surfaces and obstacles common in everyday. This contributes towards reducing the possibility of falls.

# Fall prevention and balance

The Stay Fit product line consists of a range of tools to improve balance, strength and mobility. The products are designed with safety and ease of use as high priorities, specifically targeting user groups with reduced capacities, such as older generations, patients or people rehabilitating from injuries. Fall prevention and balance training are essential for older generations, but it is also highly relevant for people re-learning walking skills after moderate or severe injuries.

# **Surface Challenge**

The Surface Challenge mimics the typical fall-causing obstacles found in everyday life. With the double rails, it is possible to exercise the necessary fall-prevention skills in a safe and controlled environment.

### **Reactive Balance Board**

The reactive balance board is one of the most efficient ways to do balance training. The body needs to be balanced while reacting to the moving surface. The double rails make balance training very safe, and with four touch-signs on the posts, a large variety of different exercises can be performed.

# Functional & flexible for every space

The Stay Fit products focus on developing strength and coordination and are all created with just one central post to combine two training stations, resulting in superior functionality in a smaller area. With just a few products and a limited budget, it will be possible to create a workout that is high on functionality.

A powerful combination is the FSW238. It combines the most used strength exercises: the pull-up and leg-lift exercises. It can also be used for triceps exercises and only takes up a few square metres.

**OVERHEAD ACTIVITIES** 

Overhead activities test upper strength and coordination.

**BALANCING** 

Balancing strengthens the muscles that help keep the body upright, as well as core and leg muscles.

### **CRAWLING**

Crawling is a great exercise that improves cross-body coordination and core strength.

# CHALLENGING PHYSICAL TRAINING

For both beginners and trained athletes

Obstacles courses have their origin in military training. However, they had already found their way to public parks where everyone could enjoy them by the 70s. Nowadays, Obstacle Course Racing is one of the fastest-growing outdoor sports, attracting people

of all ages and abilities. It challenges and develops both mental and physical strength. Different ways of doing the exercises provide different difficulty levels, which makes it work for young and old as well as for the strong and untrained.

# Challenging all

The KOMPAN obstacles are designed in a way that challenges everyone at their own level. Smart step-ups and extra grips will make it easy enough for beginners to get started on the equipment, and due to its size and height, even the most advanced athletes will find a way to challenge themselves!

# POWERFUL DESIGN WITH COLOURS

# Create an individual expression

Distinct visual and creative expressions can be made by adding unique colours to the steel parts of the fitness products.

> Different colours can be chosen to make a statement or to support and highlight an overall design theme, an aesthetic approach,

the surroundings of the fitness site, or even to represent a specific brand or corporate identity. The only limit is your imagination.

# Steel colours

Eight unique colours are offered in the standard range.

NCS S 1580-Y90R (RAL 3001)

Lime green NCS S 1070-G30Y

Night sky blue\* NCS S 7020-R80B (RAL 5003)

NCS S 7020-Y40R (RAL 8011)

Anthracite\* NCS S 8005-B20G (RAL 7016)

# **BRIGHT OR REFRESHING**

Awesome-looking fitness solutions can seem even more impressive in bright yellow or a refreshing light blue colour.

# DESIGN AND COMFORT

The design of this fitness site is made as an integrated concept and with a type of surfacing that provides maximum comfort during workouts.

# UV AND WEATHER RESISTANT

A special type of UV- and weather-resistant paint is used to apply the symbols and markings to the FLEXOTOP surfacing. For easy and accurate application, KOMPAN has designed a selection of template tools.

# **FUNCTIONAL** SURFACING WITH FLEXOTOP™ ECO

■ ■ With FLEXOTOP™ ECO, designers can be very creative. Different colours, shapes, and graphics can support and highlight the overall design theme and extend the equipment's functionality to the surface. The soft yet firm surfacing is highly inclusive, making it possible for wheelchair users to access the fitness site easily.

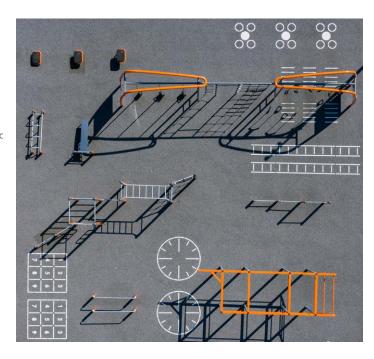

> FLEXOTOP<sup>TM</sup> ECO is high-quality wetpour surfacing from KOMPAN. From a safety perspective, this surfacing provides brilliant

shock absorption thanks to its two-layer design. Functionality and quality is ensured through TÜV certification according to EN1177 and BS 7188.

From an operational point of view, FLEXOTOP<sup>TM</sup> ECO provides a clean and comfortable surface with very low maintenance costs

# SYMBOLS AND **MARKINGS**

Sets of symbols and markings painted on the surface optimise the use of the available site area. The patterns create specific areas for functional training based upon the graphic references on the floor.

In cities, there is always a lack of space, and contemporary cities have not been designed for an active lifestyle. There is always traffic and people moving around, and as we all know, balls and cars are not a good match. Luckily there is a growing willingness to create spaces where children and adults can be active with ball sports and other activities. This MUGA is the perfect solution for a

densely populated area because, first of all, it is tall and fully closed, which ensures that all balls stay within the court. Secondly, it has a very open and transparent design, it is easy to see what is happening on the court, and it does not block light or line of sight.

All in all, it is a great little area that offers a tremendous amount of functionality in a safe and closed environment.

Minor regional deviations may occur due to differences in safety standards

# PRODUCT INFORMATION

MUGA, 12x24m, High 5m, Steel

Public parks are widely popular nowadays, and they are spaces that attract a huge variety of people. Some of them come to relax, read a book or simply enjoy the green areas. Others come to meet people and be active.

Sometimes this can cause conflicting situations, like children running after a ball in the same area where people are setting up a barbecue.

This can easily be prevented by creating active and non-active zones in a park, and

a Multi Use Games Area is a great way to create an active area.

It is designed to keep the ball inside the court and to facilitate many different sports. By choosing the Wood Plastic Composite panels, the MUGA blends into the park environment while at the same time being maintenance-free. The lifetime warranty on the steel structural parts is important because this is a site that will be heavily used and enjoyed by many!

Minor regional deviations may occur due to differences in safety standards

# PRODUCT INFORMATION

3	PAR1011	RUMBA Round Table Ø130cm
4	PAR1006	RUMBA Curved Bench 90°

Here we have an action-packed solution that functions as a fully-fledged extension of the university's indoor training facilities. The MUGA is centrally located where basketball, football, handball and hockey is entirely flat and closed. This ensures that the ball bounces back fairly and the game

can be played. The bottom row of the panels is not interrupted. The higher panels are transparent so that spectators can follow the matches and so the ball stays on the pitch.

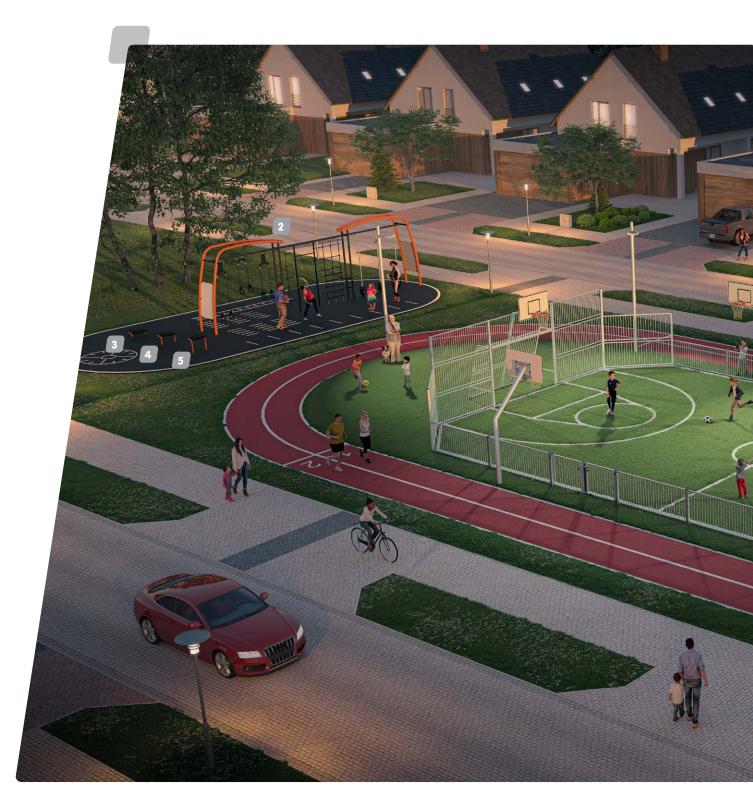

Outside the MUGA, the entire area is equipped for recreational sports. There is a place for everyone to work on an active lifestyle. The circle fitness provides room for group training or individual workouts to improve strength and endurance. Adding a running track has also proven to be a good addition in an active space like this one, especially if it also connects to an obstacle course like here, which brings an extra challenge and a lot of fun.

Life in the suburbs is all about families, and you will find a mix between young families and active agers amongst the residents. With such a diverse area comes the challenge of creating a common space that makes the neighbourhood active and attractive. A Multi Use Games Area fits right in there, as it

combines play, sports and fitness. It will bring the family and the neighbourhood together through playing basketball, handball or football. The field can be used as a full court or can easily be divided into multiple playing areas so that multiple games can take place at the same time.

KOMPAN Multi Use Games Areas (MUGA) are designed as a flexible system that will fit any purpose or environment. The intelligent design allows the MUGAs to host many kinds of games such as football, basketball, hockey, volleyball, tennis, handball, badminton – the list is endless.

Ball sports areas are popular in schools, and both teachers and children enjoy them. Teachers often say that high-quality MUGA equipment increases physical activity levels during breaks, combined with fewer conflicts. The pitches also result in better concentration and willingness to learn amongst the children in the classroom. And the students? They are just glad and grateful to have an open invitation to play!

The fully flat interior of the MUGAs will keep the ball in play which intensifies the ball game as there are fewer breaks. And at the same time, children outside the MUGA will not be disturbed by balls flying outside the MUGA.

# Multi-activities: the ball's in your court

From the moment the Aztecs and Mayans discovered a latex that formed into a bouncing spherical object, ball games have been a part of life. That means 5,000 years of searching for the perfect place to play. The games vary as much as the balls and surfaces, but they all evolved to get the most competitive fun out of the experience.

The perfect place to have that experience is in a MUGA, KOMPAN's Multi Use Games Area. As the name suggests, the venue is open to play forms of established sports like football, basketball, tennis and hockey, but, excitingly, it is also a perfect place to invent variations. It is where the rules are not necessarily written, but most certainly agreed. The only common rule is to have healthy fun. The MUGA is to sport what a convenience store is to shopping. It provides an optimised arena, a focal point for activity, somewhere explicitly designed to satisfy a need. In rural or urban areas, these compact stadiums are an important social asset as they help create healthier and engaged communities.

## Player-friendly experience

The Cosmos Multisport puts a slight twist on the play area. Available in five sizes, the octagonal shape remains the same, and using HDPE boards makes life easier for younger athletes. The high-density polyethylene sheets are a forgiving surface for any wayward shot, keeping the ball in play, and since there are no corners, the action keeps flowing.

In addition, the goal areas are narrower at the top than the base, encouraging ground-level play, reducing the need for goalkeepers and again keeping pace with the fast and furious action.

Kick-about games are great for social interaction and competitiveness whilst fostering friendships and promoting active and healthy lifestyles. The Cosmos, like the rest of the Multisport range, is an open invite for passing children to stop and ask, 'May I join?' A basketball hoop at the correct NBA height hovers temptingly above the goalmouth, so there's a choice of sporting activities.

# THE HIGHEST QUALITY MATERIALS

### Engineered to last

Nothing lasts forever. All outdoor fitness locations face the trials of weather (especially in Australia), foot traffic and vandalism and will eventually succumb to the ravages of time. That day can be postponed for as long

as possible by combining the finest materials with the cleverest designs. Quality costs, but quality also lasts – a simple equation that over time eventually pays dividends.

#### **PANELS**

Panels are made of EcoCore<sup>™</sup>, which is extremely vandalism-resistant and a highly durable and long-lasting material, giving you a playground that will look great and age gracefully. Additionally, EcoCore<sup>™</sup> provides maximum UV protection to minimise fading due to sun exposure.

#### **POSTS**

Main posts are available in three different materials giving you the opportunity to select your preferred look and quality: 1. Impregnated pine wood with in-ground steel footings. 2. Galvanised steel with powder-coated top finish. 3. Colour-anodised lead-free aluminium. All post types are designed to provide a long lifetime and low maintenance.

#### FLOORS/DECKS

All decks are supported by uniquely designed aluminium profiles with multiple attachment options in order to give you a highly customised outdoor fitness site with your favourite activities. The HPL decks come with a thickness of 18mm, a very high wearing strength and a unique KOMPAN non-skid surface texture.

#### **GALVANISED STEEL**

Our steel surfaces and steel frames consist of a hot-dip galvanised interior and exterior with lead-free zinc according to global safety standards for playground equipment. The galvanisation is corrosion resistant in outdoor environments and is maintenance-free.

#### ROPE

Ropes come with galvanised six-stranded steel wires and a steel core, impossible to wear through. Each strand is tightly wrapped with PES yarn, which is melted onto each individual strand, making the ropes highly wear and vandalism-resistant.

#### **ROBINIA WOOD**

Robinia wood is a long-lasting and robust material with a very high level of natural oils. Robinia wood makes for very durable playgrounds which are nearly maintenance-free and last for many years.

# WARRANTY

# We have industry-leading warranties

#### LIFETIME\* warranty

- Hot-dip galvanised parts
- Stainless steel parts
- EcoCore<sup>™</sup> and other high-density polyethylene (HDPE) panels

#### 15-year warranty

- Robinia wood parts
- High-pressure laminate (HPL) parts
- Aluminium parts

#### 10-year warranty

- Painted surface on galvanised or aluminium metal parts
- Pre-galvanised posts with painted top layer
- Electrogalvanised metal parts
- Solid plastic parts
- Transparent polycarbonate (PC) parts
- Wood Plastic Composite (WPC) parts
- Siberian larch, pine and other wood types
- Stainless steel slides
- Hollow plastic parts
- Rope & net structures

#### 5-year warranty

- Resin-coated plywood parts
- Springs & ball bearing assemblies
- Graphic print on transparent PC panels
- Concrete parts
- FLEXOTOP safety surfacing virgin top layer
- Galaxy connection balls

#### 2-year warranty

- Moveable plastic & metal parts
- Rubber membranes
- Screens and electronic components
- FLEXOTOP safety surfacing recycled top layer
- FLEXOTOP safety surfacing base layer
- Sunshades & sail solutions

\* KOMPAN's LIFETIME warranty is in effect for the lifetime of the product until the product is uninstalled and/or taken out of use. In addition, KOMPAN's general terms and delivery conditions apply and supplement this warranty.

#### WARRANTY COVERAGE

This warranty applies to KOMPAN's products and spare parts for the time periods described for each product type above and with the limitations described in this warranty. The warranty period applies from the date of purchase by the first customer. This warranty covers only defects in materials. KOMPAN's liability under this warranty is limited to repairing or replacing defective products, without charge, at KOMPAN's discretion. Defective electronic components will be delivered and changed by a KOMPAN ICON Professional installer free of charge.

#### PROPER INSTALLATION AND MAINTENANCE

The warranty only applies if KOMPAN's products have been installed according to the instructions provided by KOMPAN and maintained correctly according to the KOMPAN Maintenance Manual. The warranty for the ICON electrical components is dependent on those products being installed by an ICON-trained and approved installer.

#### WARRANTY EXCLUSIONS

This warranty does not cover any damage caused by accident, improper care, negligence, normal wear and tear, surface corrosion on metal parts, discoloured surfaces and other cosmetic issues or failures due to misuse or vandalism. Natural changes in wood over time are considered cosmetic issues and are not covered.

#### **NEAR WATER INSTALLATIONS**

Products installed in direct contact with chlorinated water or saltwater (Waterparks), or products installed within 200 metres from the shore, are not covered by the KOMPAN warranty for any defects caused by corrosion.

Specially designed products (handled via department for customised products), provided they have been upgraded to corrosion class C4 prior to delivery, installed within 200 meters from the shore (and not in direct contact with saltwater / spray of saltwater or chlorinated water (e.g. waterparks)) shall, subject to the applicable warranty period for each product type set out in the general warranty, be covered only against structural failure caused by corrosion (excluding moving parts) and under no circumstances for any period longer than 10 years.

#### THIRD-PARTY SUPPLIED PRODUCTS & SERVICES

KOMPAN provides non-KOMPAN branded products and installation services performed by certified third-party suppliers. This general KOMPAN warranty does not apply to such non-KOMPAN branded products and installation services, which may carry their own warranties. KOMPAN will pass on information on such warranties where possible.

#### FREIGHT AND WAREHOUSING

Global transport and logistics arranged by KOMPAN-appointed forwarder. Products/items must not be stored outside whilst waiting for installation and must be kept dry at all times.
