

Have you hit a wall trying to accelerate patient safety? Let's break through together.

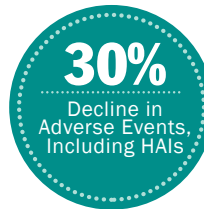

We focus on arming the people managing responsibilities across Safety, Quality, Risk, and Compliance with technology that elevates collaboration, decision-making, and accountability across your organization.

One software application with immense capability:

- Optimize time and eliminate frustration, with automation and features to make your internal processes lean.
- Make your data organized, easy to locate, and always inspection ready.
- Build trust and accomplish more with collaboration, communication, tracking, and process improvement, integrated across your organization.
- HRO, Safety Culture, and Accountability.
- Be on top of patient issues before they are discharged.
- Vastly increase the number of incidents and good catches reported by employees.
- Decentralize and guide root cause analysis to be done in days rather than months.

"We went great lengths, but the software we were using was deficient, and nothing else came close to solving the issues. So we helped SafeQual build what we need. It's what everyone needs."

*Chief Quality & Innovation Officer,
Arnot Health, New York*

- **Patient Safety**
(Incident Reporting, RCA, AHRQ SOPS)
- **Employee Health & Safety**
- **Process Improvement**
(RCA², RPI, Lean, Six sigma, FMEA, PDSA, IA)
- **Accreditation Readiness**
- **PCE/Claims Management**
- **Patient Experience**
- **Peer/Chart Review**
- **Pressure Injury Documentation**
- **Infection Prevention**
- **Audits**

SafeQual continues to work towards a world where every hospital and clinic can be positioned to deliver services ethically, efficiently, and safely to all patients. Join Us!
