ORIGAMI RISK
for Quality Managers

Software Solutions to Support and Enhance Quality Improvement Efforts

With Origami Risk—the leading risk management information system (RMIS)—take full advantage of your Patient Safety and Quality data to support quality improvement initiatives and risk reduction activities while supporting patient safety culture and transparent communication.

Incident Intake and Management

Origami's configurable incident intake system—accessible from mobile app or any internet browser—allows users to capture and report incident details quickly and accurately. Automate root cause analysis and capture investigation details to determine if corrective actions are needed.

Root Cause Analysis (RCA)

Use multiple methodologies (RCA framework, 5 Whys, state forms) to conduct and manage efficient RCAs within your organization. Quickly assign and generate RCA teams based on adverse events or independently of an incident report. Develop action plans, generate Fishbone diagrams, and track the chain of events. Easily aggregate and distribute meaningful reports and analytics identifying the primary, secondary, and tertiary root causes.

Policies and Procedures

Create and maintain organizational policies and procedures including assigned responsibility, review dates, committee members, and pertinent policy and procedure details. Auto-generate policy and procedure documents, including sign-off processes, and distribute updated policies throughout the organization. Includes version control and automated linking to relevant incident records.

Rounding Tools

Rounding tools within Origami allow users to conduct EOC, employee, and leadership rounds both online and offline. Rounding tools allow for easy capture of pressing issues and concerns while supporting Quality improvement programs through automated scheduling of rounds, follow-up activities, action plans, and reporting.

Data Aggregation, Values, Analytics and Reporting

Analytics and reporting in Origami makes Quality data analysis straightforward and fast. Capture data from third-party systems (EMR, ADT, Lab, etc.) in one, consolidated location. Origami can aggregate, normalize, and leverage your Quality data for a more meaningful and accurate reporting process.
