

ORIGAMI RISK

for Healthcare

Adaptable Healthcare & Patient Safety Solutions

Eliminate the silos of patient safety data that all too often exist within hospital systems and other healthcare organizations. Origami Risk offers platform flexibility and award-winning solutions to centralize healthcare data in an integrated, cloud-based system. Leverage analytics and reporting functionality to analyze data, identify trends, and take strategic action to improve patient safety.

Patient Safety Incident Reporting & Management

Origami Risk's configurable incident reporting system allows users to collect and report adverse events—including patient safety incidents, near misses, and unsafe conditions—quickly and accurately. Automate investigation, review processes, and determine if corrective actions are needed.

Incident Reporting & Management

In addition to patient safety incidents, Origami Risk's configurable incident reporting system can also track and report on employee incidents, security incidents, HIPAA incidents, disruptive behavior, workplace violence, and other complaints or concerns.

Online & Mobile Functionality

When setting up patient safety incident intake forms or safety audits and surveys, configure online and mobile forms for specific locations, audit groups, care settings, or roles. From any internet browser, users can capture data using online forms. For on-site intake, mobile forms can be downloaded to a standalone app available for iOS, Android, and Microsoft devices.

Data Integration

Origami offers full integration with ADT/HL7 for patient data, in addition to interfacing with ERMs, lab systems (for infection control), pharmacy (formularies), and other systems. This allows for easy data retrieval and aggregation of all adverse events in one system.

Automated Workflows

Origami Risk's automated workflow tools can be configured to streamline virtually any process. Set up automated record creation, scoring, notifications, tasks, escalations, and reminders—sent via email or displayed upon system login—to reduce administrative overhead, facilitate communication, and foster accountability.

Analytics & Reporting

Users can take advantage of dashboards, reports, and analytics to gain actionable patient safety insight across the entire healthcare organization. Origami can also integrate external data sets to facilitate data normalizing (patient care days) and further insights (number of doses, admits, procedures, etc.) into your data. Effectively analyze and report on data to identify trends and target preventative strategies.

Patient Safety Audits & Surveys

Create custom patient safety audits and surveys to promote a culture of safety throughout your hospital or healthcare organization. Provide designated personnel with direct access to audit questions using Origami Risk's custom portal functionality. Generate corrective actions based on audit responses and customized audit scoring.
